

# Release Candidate 10.1.64.12 available

We are glad to share with you the release candidate [firmware version 10.1.64.12](#).

This RC provides you a preview for an upcoming general release (Snom's fifth in 2020). It enables you to evaluate the new features, improvements and corrections in advance and to provide your feedback to us, which is highly appreciated and welcome. Please use the ticket system for your report.

We strongly suggest to handle the RC as a Beta. It is tested only automatically, but has not passed our complete manual QA test run. Install it only in a test environment, not on productive devices.

**Please read all about the known issues, limitations and the changelog before starting your evaluation of this release candidate.**

Thanks and greetings from Berlin
